

Harpers Beef Feeds

A comprehensive range of feeds formulated to deliver maximum performance for all systems:

- Balanced energy sources promote good rumen health and feed conversion
- Minerals from high bio-available sources to ensure good fertility and foot condition
- Quality protein sources and a choice of protein content
- All finishing diets contain yeast
- Focus on performance
- Fixed formulations
- Coarse ground for better digestion
- Fully mineralised protein balancer for use with home grown cereals
- Available as nuts, rolls or blends
- Available in 25kg bags, 500kg bags or in bulk.

Medicated feeds

Calf feeds can be supplied containing Deccox, the proven treatment for Coccidiosis which has been shown to increase feed intakes and weight gains. A prescription from your vet is required.

Other products

We also stock a range of molassed mineral buckets and minerals.

...your first choice

Combining exceptional local knowledge, the customer service and attention you expect from a business based on family values and the outstanding technical expertise you would demand from a leading manufacturer of quality animal feeds, Harpers Feeds are trusted by farmers across the South West.

We know all farms have different requirements so pride ourselves on having products to suit all systems and for all species, whether ruminant or monogastric. We manufacture compounds and blends and supply straights, supplements and speciality feeds as well as forage seeds and additives. Feeds are available in an extensive range of physical forms and pack sizes to give exceptional choice.

All manufactured feeds are supplied as fixed formulations so you know the next load will be the same as the last, ensuring consistent performance.

Whatever your requirements, Harpers Feeds can provide feeding solutions to deliver outstanding performance.

**Beef and growing
cattle feeds**

Focused on beef and growing cattle nutrition

The feeding challenges of all beef systems are different but the objectives are the same – to produce cattle that grow quickly, grade well and meet buyer specification to ensure the best prices. At the same time, it is important to achieve this cost-effectively, making full use of home grown feeds.

Whether you are a suckler producer, run an intensive finishing system or grow and finish cattle at grass, Harpers Feeds have a choice of products to help you raise your cattle efficiently. The feeds are designed to fit in with the range of management systems seen on-farm, so whatever your system we have the products to suit.

We also have products suitable for rearing dairy heifers, ensuring they enter the milking herd at the target age, well grown and ready to produce milk and settle into the herd.

All our feeds are backed by our FAR trained team and a range of technical support services.

Feeds for profitable suckler production

Careful feed management has a significant impact on suckler cow performance, helping ensure good levels of fertility and strong healthy calves that grow quickly and develop a high value carcass.

Suckler cow diets pre-service have to provide the energy and minerals required to complement forages while ensuring the demands of lactation are met. Harpers Beef Feeds are formulated to help encourage high levels of fertility, with protein levels that encourage adequate milk production to get calves off to a good start.

Our creep feeds are designed to make full use of the calf's early growth potential while also ensuring good rumen development, vital for converting grass into meat.

Our finisher diets ensure cattle continue to grow quickly.

Feeds for profitable grass finished cattle and reared heifers

Cattle have the ability to consume large quantities of forage. Supplementary feeds must complement the nutrients in forage to ensure the animal's needs are met. In this way they will finish on time and meet specification, or achieve target bulling weights.

Growing cattle diets need to provide structural and digestible fibre to promote rumen health and should be high in protein, minerals and vitamins. Non-starch energy sources will avoid excess fat deposition.

Harpers growing and finishing diets are formulated to provide the ideal complement in grass based systems, allowing cattle to perform to the potential throughout life.

Feeds for profitable intensively finished beef

Profitable intensively finished beef relies on high dry matter intakes and good feed conversion efficiency. To ensure the rapid liveweight gain, diets need to be higher in energy with a balance of energy sources to promote good rumen function while reducing the risk of acidosis. Yeast can be added to further improve rumen health.

Harpers beef diets contain starch and digestible fibre energy sources to encourage good rumen function combined with the energy density required for good growth. The inclusion of high levels of vitamin E, poly-unsaturated fatty acids and Omega 3 fats have a positive effect on meat quality.
