

Our grower and finisher feeds contain balanced energy and protein sources to promote continued high growth rates and a quality carcass helping lambs finish early and grade well. These feeds are available at several different protein levels.

We also supply protein balancer nuts, ideal for balancing home-grown cereals.

All sheep feeds are available in 25kg bags, 500kg bags and in bulk. They are available delivered direct or via our network of merchants.

Other products

We also stock a range of molassed mineral buckets which provide an effective way to supplement ewes in the field.

Ovilac milk powders provide a convenient way to feed orphaned lambs.

...your first choice

Combining exceptional local knowledge, the customer service and attention you expect from a business based on family values and the outstanding technical expertise you would demand from a leading manufacturer of quality animal feeds, Harpers Feeds are trusted by farmers across the South West.

We know all farms have different requirements so pride ourselves on having products to suit all systems and for all species, whether ruminant or monogastric. We manufacture compounds and blends and supply straights, supplements and speciality feeds as well as forage seeds and additives. Feeds are available in an extensive range of physical forms and pack sizes to give exceptional choice.

All manufactured feeds are supplied as fixed formulations so you know the next load will be the same as the last, ensuring consistent performance.

Whatever your requirements, Harpers Feeds can provide feeding solutions to deliver outstanding performance.

Sheep feeds

Focused on sheep nutrition

Precise feeding influences all the factors that drive the economics of sheep production:

- Tup performance
- Ewe prolificacy and lambing ease
- Ewe milk production
- Lamb survival
- Lamb growth rates
- Lamb carcase grading

Purchased sheep feeds should complement forages, providing the optimum balance of nutrients to meet the animals' needs. Harpers Sheep Feeds are designed to help sheep farmers achieve high levels of performance and excellent production from forage. They are specifically formulated to meet the nutritional requirements of ewes and lambs at different stages of production.

All our feeds are backed by our FAR trained team and a range of technical support services.

The ewe feed range

Harpers Sheep Feeds are designed to meet the specific requirements at all stages to ensure healthy, prolific ewes producing strong lambs.

While forage provides the backbone of a ewe's diet, it requires supplementation at key times to ensure high performance. Grass is commonly low in minerals and low digestibility forages can leave ewes short of energy. Harpers quality sheep feeds will help you get the most from forage.

At pre-tupping and tupping the aim is to ensure high levels of fertility which means the ewe may need additional energy and minerals. In late pregnancy the ewe's requirements for all nutrients will increase. 75% of lamb growth occurs in the last six weeks of pregnancy, placing huge demands on the ewe at a time when her appetite and feed intake is reduced. Feeding energy dense diets balanced with the correct proteins will help ensure healthy, vigorous lambs.

Post lambing she has to be fed for milk production ensuring good quantities of high quality milk to get lambs off to the best possible start.

The Harpers Ewe Feed range is formulated to help you get the best from your ewes:

- A range of feeds for all systems including protein concentrates for use with home grown cereals
- Available as meals, nuts and rolls to suit all feeding systems
- Contain balanced energy sources to give a high energy feed to complement forage which is kind on the rumen
- Balanced protein sources
- Fully mineralised with high bio-available mineral sources for maximum effectiveness.

The lamb feed range

Correct supplementation of lambs helps deliver healthy, faster growing lambs with better conformation while balancing the nutrients in forage.

Profitable lamb production is based on selling the maximum total kilos of lamb from the flock that meet the target market specification. To do this you need lambs that grow quickly and develop a strong carcase. The Harpers range of lamb feeds are formulated to deliver exceptional growth from healthy lambs.

To help develop healthy lambs, all our lamb feeds contain ammonium chloride to prevent the formation of urinary calculi and can be medicated with Deccox to help reduce the threat of Coccidiosis (vet prescription required).

Our baby lamb feeds, available as pellets or a coarse mix are designed to be highly palatable to encourage intakes and are based on specially selected ingredients to maximise the early growth potential in the first eight weeks.
